Macroeconomic Overview

The third quarter of 2017 exhibited strong equity returns across all major regions. Both global equities and U.S. equities performance (as represented by the MSCI All Country World Index) appreciated 4.5% in the quarter. Emerging market equities, mirroring the region's strong performance year-to-date, rose 7.7% in the quarter. Reflecting the notion that the U.S. market remains in a prolonged era of growth and other parts of the world are now catching up, global (MSCI ACWI Index), U.S. (S&P 500®), and emerging market (MSCI Emerging Markets Equity Index) equities have appreciated in each month year-to-date. Global bond markets extended a performance rebound that began in the first quarter, on the heels of historic losses in the fourth quarter of 2016. Global fixed income (as represented by the Bloomberg Barclays Global Aggregate Total Return Index) appreciated 1.8% in the quarter and U.S. bonds (as represented by the Bloomberg Barclays US Aggregate Total Return Index) added 0.8%.

Fund Overview

For the quarter, Transamerica Dynamic Income underperformed its benchmark, net of fees. The fund had positive relative performance contributions from its fixed income allocations that were more than offset by underperformance in its equity holdings. The master limited partnership (MLP) and two high dividend equity holdings underperformed their broad equity benchmark. Within fixed income, the emerging markets local currency bond allocation drove performance by outperforming the broad fixed income benchmark. In absolute terms, the fund had positive performance from all but one holding. The iShares Core High Dividend ETF was the top performer, gaining 4.27%, followed by the VanEck Vectors J.P. Morgan EM Local Currency Bond ETF which appreciated 3.00%. The Alerian MPL ETF was the worst performer, down 4.31%. As the fund is designed to generate income, its trailing 12 month yield was 4.3% as of September 30th.

Outlook

At the end of September, QS Investors continued to favor U.S. equities versus investment grade (IG) bonds. However, the level of conviction in U.S. equities decreased versus one month prior, largely on QS Investors' Leading Economic Indicator Index (LEI) pulling into negative territory. The LEI was driven down largely due to recent spikes in weekly U.S. initial jobless claims. Over the four prints in September, initial jobless claims averaged 278,000 – by far the highest monthly average this year. September's increase in jobless claims was largely attributed to the impact of Hurricanes Harvey and Irma, which caused widespread damage in Texas and Florida. In other asset classes, QS Investors favored U.S. high yield versus investment grade bonds. This preference was driven by spreads between these asset classes tightening, which generally favors high yield bonds. Furthermore, the persistently low equity volatility environment is generally supportive of high yield bond appreciation.

The performance data presented represents past performance, which is no guarantee of future results. Current performance may be lower or higher than the performance data quoted. Please see transamerica.com for performance data current to the most recent month-end. The investment return and principal value of mutual funds will fluctuate over time so that shares, when redeemed, may be worth more or less than their original cost.

Percentage of total portfolio	98.87

Holdings are subject to change and are not recommendations to buy or sell a security. Holdings excludes net other assets (liabilities).

Alpha is a coefficient measuring the portion of a fund's return arising from specific (non-market) risk. Historical **Beta** illustrates a fund's sensitivity to price movements in relation to a benchmark index. **R-Squared** is a statistical measure that represents the percentage of a fund's movements that can be explained by movements in a benchmark index. **Standard Deviation** is a statistical measurement that helps to gauge the fund's historical volatility.

Net asset value (NAV) returns include reinvestment of dividends and capital gains but do not reflect the deduction of any sales charges. If a sales charge had been deducted, the results would have been lower. Public offering price (POP) returns include reinvestment of dividends and capital gains and reflect the maximum sales charge of 4.75%. Performance for other share classes will vary.

The gross expense ratios for this fund are 1.30% and 1.06% for Class A and Class I shares, respectively. The net expense ratios for this fund are 1.30% and 1.06% for Class A and Class I shares, respectively. Contractual arrangements have been made with the fund's investment manager, Transamerica Asset Management, Inc. (TAM), through March 1, 2018.

Performance figures reflect any fee waivers and/or expense reimbursements by the Investment Manager. Without such waivers and/or reimbursements, the performance would be lower. Future waivers and/or reimbursements are at the discretion of the Investment Manager.

The iBoxx \$ Liquid High Yield Index and Transamerica Dynamic Income Blended Benchmark (40% iBoxx \$ Liquid High Yield Index, 30% S&P 500®, and 30% Bloomberg Barclays U.S. Aggregate Bond Index) are unmanaged indices used as a general measure of market performance. It is not possible to invest directly into an index. Calculations assume dividends and capital gains are reinvested and do not include any managerial expenses.

Asset Allocation, like many investment strategies, offers no guarantee of positive returns, and mutual funds are subject to market risk, including loss of principal. ETFs generally present the same risks as an investment in a conventional fund that has the same investment objectives, strategies, and policies. The market price of an ETF's share may be above or below the shares' net asset value; and an active trading market for an ETF's share may not develop or be maintained. Foreign and emerging market investments involve risks not associated with U.S. markets, such as currency fluctuation, adverse social and political developments and the relatively small size and lesser liquidity of the markets. Fixed income investing is subject to credit risk and interest rate risk. Investments in high-yield bonds (junk bonds) may be subject to greater volatility and risks as the income derived from these securities is not guaranteed and may be unpredictable and the value of these securities tends to decline when the interest rate increases.

Before investing, consider the fund's investment objective, risks, charges, and expenses. Contact your financial professional or go to transamerica.com for a prospectus and/or summary prospectus with this information. Read it carefully.
